

# iLift - Web App

## Remote Monitoring

iLift Web App

iLift - is Securlift's Web App that allows an easy and intuitive configuration and monitoring of the elevator equipped with Securlift control system.

The controller can be remotely accessed by any Internet connected device: Smartphone, Tablet, Pc.

The system runs on the data connection of the GSM device provided for emergency calls: therefore, no need for additional hardware or SIM card!

The controller communicates with the GSM device through CAN-bus connection.

The application allows following functions:

- Visualisation of the elevators status (alarm history; car position, direction and destination; door status; safety circuit; drive commands; etc.).
- Registering and execution of lift calls, controller reset, Out of Service function.
- Installation management for each customer.
- Access to monitoring can be set for different collaborators with programmable restrictions.
- Generate a graph of the car speed (in combination with the Limax absolute positioning system).
- Alarms notifications on multiple email addresses.
